

Compression garment Valencia 1198

Indication

- After breast surgery, during the healing phase – for stabilisation and support
- After breast conservation therapy (BCT/partial surgery)
- After plastic surgeries such as breast reduction (reduction mammoplasty), breast lift (mastopexy), breast reconstruction / enlargement with implant.

Application / Special features

- The use of a controlled compression bandage for postoperative treatment after breast-conserving surgery reduces post-surgical complications from 32% to 15%, and outperforms traditional compression bandages in terms of efficacy, safety and comfort (Source: Findings of the CIR-ORT 2014 medical study, Spanish Society of Senology and Breast Diseases).
- Immobilisation of the breast to support wound healing
- Evenly dosed compression pressure counteracts swelling
- Can reduce the risk of postoperative lymphoedema
- Can be worn with post-surgery belt for additional support : Berlin 0059 / Lyon 0058

Padded zip

Cut high in the back for circular compression

Infinitely adjustable hook and loop fastener on the strap

Controlled compression from the underbust area to the straps

Mold

Wide, elastic waistband

Creates an optimal shape and holds the operated breast firmly in place

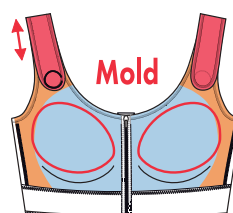

Practical zip with hook and eye closure underneath for easy closing
