

## Compression garment Osaka 1199

### Indication

- After breast conservation therapy (BCT/partial surgery)
- After plastic breast surgery, such as breast reduction, breast lift or breast reconstruction with implants
- Particularly suitable when the surgical incision is in the underbust fold as there are no seams in the underbust area

### Application

- Creates an optimal shape and holds the operated breast firmly in place
- Supports the healing process with controlled compression in the scar area, relieves the lymph drainage pathways
- Breathable and temperature-regulating – interior made of soft, hydrophilic terry
- Can be worn with Post-OP belt for additional support: Berlin 0059 / Lyon 0058

Generously and steplessly adjustable straps

High cut at the back for 360° compression

Narrow straps

Temperature-regulating, breathable material: soft, hydrophilic terry material on the inside, with no seams pressing directly on the skin

Creates an optimal shape and holds the operated breast firmly in place

**Mold**

Controlled compression from the underbust area to the straps

Flexibly adjustable during the healing process with 2-way adjustable hook and eye closure at the front

Tip: can be used as a sports bra after healing
